

Country Information App

The app will feature a Tab Bar with two main options: "Countries" and "Currency".

Countries Section: In the "Countries" section, the app will display a vertical collection view with 2 cells per row, showing the name and flag of each country.

Upon selecting one of the countries, a second screen will open using a present (not a push), where the following detailed information about the country will be displayed:

- Name (in the nav bar title)
- Flag
- Capital
- Language
- Currency *
- States **

* this option must can be select, when the user interact with that, should show Currency Conversion Tab

**States should be displayed in a table view, and upon selecting one, the points of interest of that state will be shown.

Currency Conversion Tab:

In the "Currency Conversion" tab, users will be able to select two currencies from a picker containing the names of all currencies of the displayed countries.

Between each picker, there should be an image (>) or (<) indicating the direction of the arrow, depending on where it points. This will serve as an indicator for the conversion direction.

Then, they can enter a numerical value in a Textfield. Upon pressing the "Convert" button, the result of the conversion between the two selected currencies will be shown in a label. Can't display negative numbers
